

## ***BEC62(08) product overview***

---

The BEC62(08) is a three-phase, four wire, STS compliant prepayment electricity meter ideal for residential, commercial and light industrial electricity metering applications.

The device is also termed a “split” meter, consisting of two items; the MCU (measurement control unit and the UIU (User interface unit). The MCU is installed outside the customer premises in a meter box or kiosk, while the UIU sits inside the customer premises.

The BEC62(08) solution provides a number of innovations, the split function serves as a great advantage to the utility as access to the meter is restricted, thereby reducing the chance of meter tamper. The unit also has a wide range of programmable functions, to provide a high level of customisation for each utility.

**Figure 1: The BEC62(08) MCU and UIU**

<b>Item</b>	Measurement control unit (MCU) or meter	User interface unit (UIU)
<b>Mounting</b>	BS footprint	Bracket
<b>Installation</b>	Meter box, kiosk or similar external to consumer premises	Wall mounted inside consumer premises
